

# INFORMATION SEMINAR

TIME: 8:30 AM

DATE: THURSDAY JUNE 3, 2004

LOCATION: THE PINES, CAMBRIDGE ON.

## Itinerary and Details

8:30: Arrive at the Pines for Breakfast 9:00: Seminar Presentations as follows:

### Making the Adaptive Enterprise Real Through IT Consolidation

The IT consolidation process has many entry points, depending on the current integration of your infrastructure and your business objectives. HP's Adaptive Enterprise solutions can help you at any point, whether you have a distributed environment - with many servers running hundreds of applications on multiple systems throughout your organization - or a centralized strategy with server sprawl taking over your data center. This presentation from HP will outline a consolidation journey and the practical technologies that you can implement for your unique situation.

### Managing your IT Communities

FoxNet can provide managed services for mid-market customers focusing on HP Open View, ASP, and Distributed Data Protection services. The amount of enterprise data residing on desktops and laptops is increasing rapidly. Managed Services Plus for DDP eliminates the possibility of data loss, protecting your productivity.

### Oracle Grid Computing

Find out about Oracle Grid Computing and how it is engineered to pool together many servers to create a single, mega-computing resource. Grids effectively combine and take advantage of all resources in a cluster to provide capacity on-demand and high availability. You will also learn how you can leverage Oracle 10g to maximize IT utilization in your organization.

### FedEx Case Study

A truly adaptive enterprise: By consolidating a small section of IT infrastructure, FedEx Canada leveraged two million dollars of savings. Today you will hear directly from Terry Pavey, Managing Director of IT for FedEx Canada, on how they used a mid-range technological solution to save \$2 Million Canadian.

### Where to Implement Linux

Many IT managers get spooked by the prospect of migrating all of their applications to a new environment. But the cost and service benefits can far outweigh the comfort of sticking with proprietary systems. To help you better understand this move FoxNet, your HP Linux Elite partner, will discuss where and how other companies have successfully implemented Linux in their environments.

RSVP - Tara Moffatt-519-886-8895 x.203  
tara@foxnetsolutions.com
